## Overview

---

Operational solar assets are continuing to experience higher than expected rates of degradation, with annual degradation in the field at around 1 percent, according to a Solar Risk Assessment report by kWh Analytics. In this blog, we'll explore the ins and outs of commercial solar depreciation, including how it works, why it happens, and what you can do to maximize the value of your solar investment. Let's get started! [What Is Solar Panel Depreciation?](#)

Depreciation is commonly defined as “the process of an. ADR is typically expressed as a percentage, representing the average rate at which the efficiency of solar panels decreases each year. Simply put, it measures how much a battery's capacity diminishes yearly due to factors like chemical aging, usage patterns, and environmental conditions.
