

Belgian residential solar container subsidy policy

Overview

The amount depends on household income, installed surface area and building location. Netherlands: The Netherlands government is encouraging people to increase their self-consumption with solar panel subsidies such as reducing the VAT to 0% on photovoltaic systems installed in family homes. The scheme was introduced in January 2021, after the region's net Eneco is investing in a major battery energy storage project in Ville-sur-Haine in Wallonia, Belgium. From 2025, the installation of solar panels and solar water heaters in new builds is now subject to the standard VAT rate of 21%. It will also end the home battery premium earlier than initially announced, from April 2023. Good news: if you install photovoltaic panels, a domestic battery or an energy management system, you can benefit from a number of grants and subsidies, depending on your region.
