

Calculation of frequency regulation capacity of solar container power station

Overview

In this paper, based on the traditional power system load frequency control model, the frequency response model of the power system with photovoltaic is constructed considering the frequency modulation of photovoltaic participating system and the influence of. Firstly, the cost issue is an important consideration, especially in FR applications that require high discharge duration, where the cost of the technology remains high ratio of conventional synchronous power plants. With the large-scale development of photovoltaic power generation, photovoltaic power plants (PVPP) are required to participate in primary frequency regulation to maintain the stability of the power system.
