

# **Current solar container charging and discharging efficiency**

## Overview

---

, 2C) can decrease battery efficiency over time, reducing storage capacity and shortening battery life. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems. Charging occurs when your photovoltaic panels convert sunlight into electricity, then this surplus energy is stored in batteries. Employing energy storage capabilities is needed to capitalize on decarbonization efforts, ensure grid stability during peak demand as well as outages, and enable a cleaner and more resilient future.
