

# **Design of photovoltaic solar container microgrid**

## Overview

---

This study aims to determine whether solar photovoltaic (PV) electricity can be used a ordably to power container farms integrated with a remote Arctic community microgrid. In the ongoing effort to lower the cost of microgrid deployment, one concept that continues to evolve is that of the modular microgrid, best expressed in a system that can fit inside a single shipping container. A mixed-integer linear optimization model (FEWMORE: Food-Energy-Water Microgrid Optimization with Renewable Energy) has been. Each system integrates solar PV, battery storage, and optional backup generation in a modular, pre-engineered platform that is scalable for projects ranging from 5kW to 5MW+. BoxPower systems are pre-wired in standard 20' shipping containers to withstand harsh weather conditions, simplify shipping, reduce costs, and.
