

# Enamel coating solar container

## Overview

---

These devices harness solar energy to heat water, offering an environmentally friendly and cost-effective alternative to traditional electric and gas water heaters. Enamel coating solar water tanks are designed to capture sunlight through solar panels, converting it into thermal energy. It mainly comprises a water storage enamel inner container, and a water storage enamel inner container inside is provided with a heat-exchange inner. These high-reflection white enamels boost the power generation efficiency of PV modules, while high-transparent color enamels serve decorative purposes.

## Enamel coating solar container
