

How much ice can a commercial ice maker with bottled water store

Overview

While many countertop ice makers compatible with bottled water typically hold around 1.5 to 3 pounds of ice, commercial ice storage bins can range widely, with smaller dispenser bins holding 90 to 250 pounds, and larger models capable of storing thousands, such as an Ice House. With an inventory of over 30,000 ice machines and thousands of installs under our belts, Easy Ice knows how much ice is needed for different businesses and use cases. While a grocery store that fills hundreds of cubic feet of fresh seafood, meat, and produce displays with flake ice may need a massive machine, a countertop commercial ice maker may suffice for most convenience stores. So, if you're serving 100 meals a day, you'd need 150 to 200 pounds of ice daily. For smaller-scale or point-of-use applications, countertop, under-counter, and dispenser-style ice makers are popular options.

How much ice can a commercial ice maker with bottled water store

4.2 Commercial Ice Machines
