

# **Indian solar container vehicle integrity cooperation**

## Overview

---

To launch this partnership, the United States and India are working to unlock USD\$1 billion in new multilateral finance through the International Bank for Reconstruction and Development (IBRD) for projects that include catalyzing India's domestic clean energy supply chain buildout. Through the deployment of electric buses and the development of solar-powered vehicles, India can reduce its carbon footprint, enhance energy security, and promote economic growth. In a world battered by climate disasters, energy insecurity, and geopolitical fragmentation, India offers an audacious alternative: a solar civilization built on equity, innovation, and self-reliance. <sup>3</sup> To accelerate the worldwide shift towards achieving net zero emissions, it is imperative to accelerate solar deployment. Resilient, diverse, and sustainable supply chains play a crucial role in enabling this transition. energy deployment across its Member Countries, particularly in regions with limited energy access. CORNEX and its Indian partner signed a 5GWh energy storage cooperation agreement at CORNEX Global Headquarters, and the two parties will carry out in-depth cooperation regarding 5MWh battery energy storage container, which is the CORNEX M5 energy storage system.
