

Investment value of power storage

Overview

The global battery industry has been gaining momentum over the last few years, and investments in battery storage and power grids surpassed 450 billion U. Investors could adjust their evaluation approach to get a true estimate—improving profitability and supporting sustainability goals. The International Renewable Energy Agency (IRENA) is an intergovernmental organisation that supports countries in their transition to a sustainable energy future and serves as the principal platform for international co-operation, a centre of excellence, and a repository of policy, technology. Grid-scale storage can play an important role in providing reliable electricity supply, particularly on a system with increasing variable resources like wind and solar. Electrical Energy Storage (EES) systems store electricity and convert it back to electrical energy when needed.
