

Liquid crystal solar container

Overview

From portable units to large-scale structures, these self-contained systems offer customizable solutions for generating and storing solar power. A new study by researchers at the University of Illinois Urbana-Champaign describes a breakthrough in the field of organic solar cells (OSCs), bringing the technology one step closer to commercial viability. OSCs are a compelling technology that can turn any surface into a power generator. That is why we have developed a mobile photovoltaic system with the aim of achieving maximum use of solar. This makes them suitable for unique applications such as powering backpacks and tents or enabling windows to convert sunlight into.
