### python

`list[a:b:c]`, a is the starting index, b is the ending index and c is the optional step size. This will give you a list starting at index a (inclusive) and ending at index b (exclusive) picking elements at ...

### Meaning of `list[-1]` in Python

I have a piece of code here that is supposed to return the least common element in a list of elements, ordered by commonality: 

```
def getSingle(arr): from collections import Counter c = Counter
```

### What is the difference between `list` and `list[:]` in python?

When reading, `list` is a reference to the original list, and `list[:]` shallow-copies the list. When assigning, `list` (re)binds the name and `list[:]` slice-assigns, replacing what was previously in the list.

...

## Public Sector Undertakings in India

Public Sector Undertakings (PSUs) can be classified as Central Public Sector Undertakings (CPSUs) or State Public Sector Undertakings (SPSUs). CPSUs are administered by the Ministry of Heavy ...

## What is the difference between list [1] and list [1:] in Python?

By using a : colon in the list index, you are asking for a slice, which is always another list. In Python you can assign values to both an individual item in a list, and to a slice of the list.

## Maersk , Integrated Container Logistics & Supply Chain ...

Maersk is an integrated logistics company that offers supply chain solutions for managing shipments and cargo. Learn how to register, book and find prices.

## slice

The first way works for a list or a string; the second way only works for a list, because slice assignment isn't allowed for strings. Other than that I think the only difference is speed: it looks like it's a little ...

## How do I get a safe senders list started?

To get a safe senders list started in Gmail, follow these steps: Log in to your Gmail account on a desktop browser. Click the gear icon in the upper-right corner and select "See all ...

## Python: list of lists

The first, [:], is creating a slice (normally often used for getting just part of a list), which happens to contain the entire list, and thus is effectively a copy of the list. The second, list(), is using the actual ...
