

# London solar container power station project

## Overview

---

This deal aims to harness solar energy, which will help meet some of the electricity demands of the London Underground. The Longfield Solar Energy Farm, a subsidiary of EDF Renewables UK, is set to be constructed in Essex starting in 2026. When completed, the facility is expected to supply 80 GWh of clean electricity to TfL. DP World's London Gateway port will host one of the world's first micro modular nuclear reactors, backed by £80m in private investment. Under a new agreement, London will source enough solar power to run its light railway and tram networks entirely on renewable energy. This is according to a statement from the UK government following US President Trump's reception. A statement from the British government published on 15th September, titled "Golden age of nuclear delivers UK-US deal on energy security," outlined a substantial list of nuclear power projects that are being.
