

# **Lusaka air solar container project**

## Overview

---

Located in Zambia's capital, this 15 MW/90 MWh facility uses compressed air energy storage (CAES) to stabilize the grid and support solar/wind integration. Think of it as a giant "energy bank" that reduces waste and keeps lights on during peak hours. Summary: The Lusaka Air Energy Storage Project is transforming how Zambia integrates renewable energy into its grid. To reduce dependence on fossil fuels, the AA-CAES system has been proposed [9, 10]. This system stores thermal energy generated during the compression process and utilizes it to heat air during expansion process [11]. Frank Sesno reports on ARES, a new technology that uses weighted rail cars and gravity to try create an efficient solution to the intermittency of solar and Afcons Managing Director, S Paramasivan, and, Executive Director (Operations), Akhil Gupta, speak about the Lusaka City Decongestion project.
