## Overview

---

This study explores the status, challenges, and prospects of solar thermal energy in Mozambique, emphasising its role in sustainable building heating. Let's face it—when you think of Mozambique, solar thermal storage costs probably aren't the first thing that comes to mind. ) But here's the kicker: This Southern African nation gets over 2,800 hours of annual sunlight —enough to make even. Think modular battery packs smarter than your average toaster, built in a facility running on 100% solar power. With a national access rate of just 34%—and significantly less in rural areas—this policy creates one of Africa's most compelling and structured market opportunities for solar energy. Does Mozambique need a hybrid solar-wind system?

This paper presents a comprehensive analysis of Mozambique's energy transition, focusing on integrating a hybrid solar-wind system with green hydrogen storage. A storage heater or heat bank (Australia) is an electrical heater which stores thermal energy during the evening, or at night when electricity is available at lower cost, and releases the heat during the and releases heat during the peak period.
