

# **New transportation solar container technology in the united states**

## Overview

---

Instead of employing noisy diesel generators or exposed power lines, these plug-and-play systems include solar panels, inverters, batteries, and all else in a shipping container—ready to deploy, ship, go, and turn on. This innovative technology not only reduces the carbon footprint but also ensures the seamless transportation and storage of temperature-sensitive goods. The Port Newark Container Terminal in New Jersey is now one of the few shipping hubs in the world to use on-site solar power to cut its own emissions (cropped; courtesy of Standard Solar). These innovative setups offer a sustainable, cost-effective solution for locations without access to traditional power grids. SeaCube partnered with Greensee to launch SeaCube's Green and Net-Zero Reefer Leases, powered by Greensee's AI-driven CO2 emissions reporting technology, setting a new standard for energy efficiency and environmental responsibility in cold chain logistics.
