

Nitrogen storage tank structure name

Overview

A liquid nitrogen tank, also known as a cryogenic tank or dewar, is a specialized container designed for the storage and transportation of liquid nitrogen. Nitrogen is an odorless, colorless, and inert gas that is widely used in various industries and applications for a quite long time. At a temperature of -196°C (-320°F), nitrogen in its liquid form (LN2) can be used in tanks or freezers for maintaining samples in a cryogenic condition.
