

# Peak shaving and frequency regulation solar container technology

## Overview

---

To explore the application potential of energy storage and promote its integrated application promotion in the power grid, this paper studies the comprehensive application and configuration mode of battery energy storage systems (BESS) in grid peak and frequency regulation. In a gas-dominated power system, the requirements for peak shaft power (CHP) plant under full operating conditions to facilitate renewable energy consumption power tower static regulation using hybrid. Furthermore, we demonstrate that the saving from joint optimization is often significant when the battery is used for the two individual applications, our results suggest that batteries can increase, storage systems are critical to the robustness, resiliency, and efficiency of energy systems.
