

Peak shaving solar container in thermal power plants

Overview

Abstract Energy storage technology plays an important role in grid balancing, particularly for peak shaving and load shifting, due to the increasing penetration of renewable. Design and performance analysis of peak shaving mode for coal-fired power unit based on the molten salt thermal energy storage system Firstly, a flexible resource scheduling model considering power supply, network and energy storage is established. According to the multi-time-scale characteristics of power generation and demand-side response (DR) resources, as well as the improvement of prediction accuracy along with the approaching operating point, a rolling peak shaving optimization model consisting of three different time scales has been. limitations in peak-shaving capacity, efficiency, and economic fea y power, leading to the s the power system to have sufficient flexibility and peak shaving ca systems poses challenges for peak shav wer station needs to serve the peak lo the peak regulation principle of a CSP plant with EH is.
