

Positive and negative electrodes of high voltage solar container capacitor

Overview

They have a positive and negative electrode, referred to by their respective technical names: the anode and the cathode. A supercapacitor (also called an ultracapacitor or electrochemical capacitor) is a type of electrochemical energy storage device. Supercapacitors are energy storage devices meant for applications that require high power, long lifetime, reliability, fast charge and discharge, and safety. Non-polarized capacitors, such as film capacitors or ceramic capacitors, do not have a designated positive or negative terminal and can be inserted in any direction.
