

# Rare earth new solar container

## Overview

---

Major projects now deploy clusters of 20+ containers creating storage farms with 100+MWh capacity at costs below \$280/kWh. Unlike the wind power and EV sectors, the solar PV industry isn't reliant on rare earth materials. Instead, solar cells use a range of minor metals including silicon, indium, gallium, selenium, cadmium, and tellurium. Ramón Barúa Costa of Aclara Resources specializes in critical materials, particularly rare earths, and sustainably producing these elements. As the world accelerates toward decarbonization to combat climate change, demand for clean energy technologies—from electric vehicles (EVs) to wind turbines. Pre-fabricated containerized solutions now account for approximately 35% of all new utility-scale storage deployments worldwide. MP Materials is America's only fully integrated rare earth producer with capabilities spanning the entire supply chain—from mining and processing to advanced metallization and magnet manufacturing.
