## Overview

---

In order to achieve load frequency control (LFC) of the power system with integration of solar PV, this study employs the construction of a proportional integral derivative (PID) scheme that has been fine-tuned via the flower pollination algorithm (FPA). Strategy of PV has been formulated for frequency regulation. Concentrating solar power plant (CSP) is particularly with the integration of SS is the next generation off grid solar inverter with power range 1000VA 1500VA. In a frequency regulation, the energy storage container simulates the inertia characteristics of a synchronous generator through "virtual inertia control".
