

# Togo pumped storage project

## Overview

---

The study financed under this agreement will define a 55 MW pilot storage project and establish a national BESS roadmap to guide the future deployment of this technology in Togo. AFD and Global Energy Alliance also plan to extend this approach to other African countries. This \$300 million initiative aims to tackle energy shortages while boosting grid stability - and honestly, it's about time someone addressed. This agreement will finance feasibility studies for a battery energy storage system (BESS) project in Togo - a crucial step to integrate more renewable energy and achieve universal access to electricity by 2030. The Tubatse project was previously approved as a top-priorit "s second phase of project development.
