

# Us all-vanadium liquid flow battery solar container project

## Overview

---

This article's for engineers nodding along to redox reactions, policymakers seeking grid stability solutions, and curious homeowners wondering if they'll ever get a vanadium battery for their solar panels. Workers install solar panels at the Chappice Lake Solar+Storage Project north of Medicine Hat. It is the only vanadium flow battery deployed at scale in Canada, with a storage capacity of 8. Self-contained and incredibly easy to deploy, they use proven vanadium redox flow technology to store energy in an aqueous solution that never degrades, even under continuous maximum power and depth of. The objective of SI 2030 is to develop specific and quantifiable research, development, and deployment (RD&D) pathways to achieve the targets identified in the Long-Duration Storage Shot, which seeks to achieve 90% cost reductions for technologies that can provide 10 hours or longer of energy. The rapid expansion of renewable energy is reshaping how electricity is generated and consumed.
