

What are the selection requirements for solar container capacitors

Overview

The selection of a solar capacitor requires a comprehensive understanding of its electrical characteristics, including capacitance and voltage. These parameters are heavily influenced by the specific requirements of the solar system in which they are employed. The purpose of this document is to suggest possible ways for selection, screening, and qualification of commercial capacitors for NASA projects and open discussions in the parts engineering community related to the use of COTS ceramic capacitors. These capacitors have drastically different electrical and environmental responses that are sometimes not explicit on datasheets or requires additional knowledge of the properties of materials used, to select the best solution for a given design.
