Overview

A mobile solar container can provide clean, off-grid power to remote locations, construction camps, island resorts, and field operations. The systems are expanding in application where diesel delivery is not feasible, and grid access does not exist. These types of containers involve photovoltaic (PV) panels, battery storage systems, inverters, and smart controllers—all housed in a structure that can be shipped to remote. Good choice for disaster relief whenever it is important to deliver electricity as quickly as possible.
