

# **What does the solar container inverter function mean**

## Overview

---

A solar inverter is essentially a device that converts DC (direct current) electricity—the electricity your solar panels generate—into AC (alternating current) electricity, which is what your home, business, or off-grid system actually operates on. But what is a solar inverter—and why does every solar system need one?

Here's a clue: without a solar inverter, all of those shiny panels on your roof—or on a solar container—wouldn't power so much as a coffee brewer. Think of DC power as raw, untamed energy—powerful but not in a format that your home can use. Your household appliances, from your TV to your toaster, all run on Alternating Current (AC).
