

What is the main work of solar container power station operation and maintenance

Overview

The operation and maintenance of a solar PV power plant are crucial for its efficient and reliable performance. This process encompasses the main functions of monitoring, inspecting, cleaning, and repairing the various components of the power plant. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. A solar power plant is made up of components such as solar panels, inverters, combiner boxes, distribution boxes, mounts, and connecting wires. Therefore, maintenance management is essential for reliable and effective operation of PV power plants, ensuring uninterrupted system operation and minimizing downtime.
