

Where is the substation solar container device installed

Overview

The first step is to prepare the site and install the substation foundation. Next, install the transformer and switchgear inside the enclosure and make the necessary connections. Customers requiring shorter overall delivery times and minimal on-site work have been the main drivers for Hitachi Energy's development of pre-fabricated indoor substations. Smaller distribution substations are subdivided into container-sized modules, which can be manufactured, assembled and tested. In a substation there are numbers of incoming and outgoing circuits each having its isolator, circuit breaker, transformers etc.
