

Working principle of solar container tank injection molding machine

Overview

The machine heats the raw plastic material to a molten state, then injects it into a mold cavity under high pressure. LightManufacturing Solar Rotational Molding systems make large plastic products like water tanks without burning fossil fuels. The factories can be deployed to any sunny area, and do not require any infrastructure (no. One of the key components of this machine is the accumulator, which serves as a reserve unit for power storage. Moulding conditions or process parameters play a decisive role that affects the quality and productivity of plastic products.
