

X-ray machine high power solar container device

Overview

They can be line or portable generator powered automatically adapting to standard input voltages to permit all day inspection under extreme conditions virtually anywhere. For cargo systems, high-energy, high-performance transmission X-rays deeply penetrate densely loaded containers for greater detection. For this reason, Italray proposes a solar powered x-ray solution, where a small photovoltaic battery guarantees optimum performance (50 KW) to the radiographic room. In addition, with high reliability and low maintenance, the state-of-the-art system offers an easy upgrade path for clinical sites transitioning to digital.
